Allowable Subject Matter

1. Claims 1-18 are allowed.

2. The following is an examiner's statement of reasons for allowance:

In interpreting the claims in light of the Specification and applicants' arguments, the examiner finds the claims to be patentably distinct from the prior art of record. The prior art does not teach or suggest either alone or in combination the claimed limitation of "closing said port in response to detecting operational variations that are unfamiliar to said LAN." The applicants argued in the response filed September 19, 2005 that Bernard, Sitaraman and Kimball fail to teach such a limitation. Applicants also argued "Kimball fails to teach or suggest this limitation. Kimball purports to teach preservation of a network connection by providing a dual-connection option. This actually teaches away from 'closing said port in response to detecting operational variations that are unfamiliar to said LAN,' as claimed because providing redundant connections would require monitoring twice the number of connections. This would essentially double the workload of the present invention." See Remarks filed January 20, 2005, page 10, lines 5-13. Upon further consideration, the examiner finds this argument to be persuasive.

Kimball teaches a redundant connection system wherein upon monitoring and detecting a problem on a communication link a redundant link is established, i.e. network management configuration, permission problems, or a lack of a healthy device or physical connection at the other end. On the other hand, the claimed invention closes the port upon detecting operational variations that are unfamiliar to the LAN rather than establishing a redundant link. The claimed invention effectively terminates the connection without efforts to provide redundant links or to

reestablish the connection. Additionally, in the prior art all operational variations are familiar to the LAN, i.e. anticipated. Permission problems, link quality, etc. are conditions which are familiar which the system attempts to remedy. The claimed invention, on the other hand, deals with operational variations that are unfamiliar, or unanticipated.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
